

Line Art

The two drawing examples on this page are vector graphics derived from CAD drawings.

The top drawing was created from a 2D AutoCAD drawing. We converted it to a .wmf file and inserted it into a Microsoft Word document. Using the Word drawing editor, we adjusted line weight.

The bottom drawing was created from a 3D Pro/ENGINEER model. A 2D drawing was made from the model and exported as a .dwg file. We converted it to a .wmf file and inserted it into a Word document. We added the callouts and adjusted line weight in the Word drawing editor.
